technical specifications

Automatic Tool Change ATC

Tools numbers	On demand.
Machine measurements	Standard or on demand.
CNC control	MPG, keyboard and screen.
Vacuum system	On demand.

CUSTOM MANUFACTURING

Thanks to the combination of controls and CNC control, the operation is simple, fast and efficient. Positioning the machine and starting a job becomes a quick and easy task. Making your jobs very easy.

Probe for zeroing Z axis of the tools. With this system the height measurement of the tools is an automatic process.

Milling cutter installation system. With this system, installing new tools is a quick, simple and effective process.

WARRANTY AND CERTIFICATES

Warranty policy on the website.

Together with the guarantee of quality and industrial performance that we provide as manufacturers, and that is backed by a large number of customers, **another fundamental element that differentiates our products is their certification and CE marking (European Conformity)**, which in our case means that the manufacturing and delivery processes have been audited by an external entity, which has endorsed that they are compliant with harmonized European regulations, respecting the relevant health and safety requirements, and therefore their manufacture, marketing and use is authorized in any country of the European Union.

Always choose a product duly approved and marked, since there are quite a few examples of products on the market WITHOUT THE CE MARKING or WITH AN INCORRECT OR FRAUDULENT CE MARKING, which can derive in the withdrawal of the machine by the competent inspection and control authorities, to problems with insurance, civil liability or labor risk prevention regulations.
